Intro

Hey there! I'm Megan Diulus, a sophomore at MIT, where I'm studying Computer Science and Engineering (aka Course 6-3, for those in the know). When I'm not spending \$7 on an iced latte, you can catch me running around Boston with MIT's Varsity Cross Country and Track Teams.

I'm interested in software engineering or product management opportunities where I can enhance my leadership skills, sharpen my coding abilities, and develop valuable skills in project management and user-centered design.

Background

Originally from Akron, Ohio, and I'm the eldest of five (so yes, I did drive a minivan in highschool). Back when I was the center of the universe and my dad was in the Navy, my mom and I enjoyed the California sun. But after my brother came along, we moved back to *THE* Ohio. I'm also a huge dog lover—I've had eight dogs in my life but currently live with three (rip...). It's kind of like having a few extra siblings, but with less yelling.

Projects

Training Data Visualizer

I built a Python project to track and analyze my training progress by extracting data from my Google Sheet training log. Using gspread for data retrieval and matplotlib for visualization, I created dynamic plots to monitor metrics like distance, heart rate, and performance ratings over time.

Personal Website

I designed and developed this website from scratch to showcase my projects, interests, and achievements. Built with a focus on improving my web development skills, it features a responsive design and interactive elements. This project allowed me to hone my skills in HTML, CSS, and JavaScript, while also giving me a platform to share my journey and connect with others.
